# ATLAMEC GEL

ORAL GEL

## COMPOSITION

Ivermectin ..... 0.20 g  
Excipient qs ..... 100 ml

## PHARMACEUTICAL PROPERTIES

Ivermectin, is an antiparasitic of the family of avermectins endowed with a great activity as well on the internal parasites as external of the domestic animals. Ivermectin acts on nematodes and arthropods via gamma amino-butyric acid (GABA). It causes its release from the presynaptic membrane and potentiates its binding to receptors located on the postsynaptic membrane. At the recommended doses, ivermectin is very well tolerated in both adults and young people and can be used at all stages of gestation.

## TARGET SPECIES

Equine.

## INDICATIONS

Treatment of internal parasitic infections in horses.

## ADMINISTRATION AND DOSAGE

ATLAMEC-GEL is recommended exclusively orally at a dose of 0.2 mg of active ingredient / kg of bodyweight, ie 1.0 ml / 10 kg of bodyweight in the target species.

## CONTRAINDICATIONS AND INTERACTIONS

ATLAMEC-GEL is not recommended for slaughter horses. ATLAMEC-GEL can be combined without any negative interaction with douvicide anthelmintics.

## SIDE EFFECTS

If the general conditions of use are respected, no side effects are observed.
